

Application Guide for Breakroom Facilities

SaferTouchTM antimicrobial film is an effective barrier designed to protect critical touch surfaces. The product provides a cleaner surface and prevents the buildup of microorganisms. The film is designed for breakrooms, facilities touchpoints, and a variety of additional applications for lasting surface protection.

SaferTouchTM antimicrobial film is available in a variety of protective products for your application, including tapes and films. In addition, large-format sheets/rolls can be supplied for further onsite customization or fit to your unique uses.
